

Place liquid fertilizer with confidence & precision

gx7 flow

If you are using liquid fertilizer today then you already understand the tremendous value it can have on yields and health of your crop. Liquid fertilizer however can be costly and do you always know you are placing the correct amounts? GX7 Flow is a simple yet powerful way to know you're nourishing your crop as you intended. Built using the latest in mobile, sensor, and cloud technologies, the GX7 Flow gives you the peace of mind that nutrients are applied at the right time and in the right amount.

Features

- Seamless integration with AgXcel liquid fertilizer application systems
- Individual row-by-row monitoring. Know exactly how each row is performing
- Rich user experience using latest mobile technologies
- Flow data stored for post-job analysis and yield comparisons
- Simple installation product support
