

## Benefits of the AgXcel GX20 Dry Treater

1. **GX20 uses dual 5.3 GPM pumps –**
  - a. this allows the GX20 to compensate for
    - i. higher application rates
    - ii. higher viscosity liquids
    - iii. preventative maintenance in case a pump goes down
    - iv. dry plants that can run up to 5 ton per minute volume as this can be very taxing on a single pump system.
  - b. Additionally, AgXcel has tested other alternative pumps as back up pumps for higher rates or alternative liquids
2. **Banjo 1/2" full flow valve vs micro control valve**
  - a. A micro control valve can only flow at 1.6 GPM whereas the Banjo can allow up to 7.0 GPM
  - b. This is critical when you have high volume dry plants that can run at 5 ton per minute
3. **Wi-Fi Connectivity**
  - a. Wi-Fi allows for up to 100ft of wireless connection. And additional Wi-Fi extender kit can extend this range dramatically as the USB booster can be daisy chained
  - b. Other methods such as a key fob, or Bluetooth to control their box which uses radio transmission and has a range of about 32 feet
4. **One module can run up to 3 system**
  - a. GX20 single module can run up to 3 pumps system with the first system running up to 6 products. One single control module can run 3 different systems and system 1 can manage up to 6 different products with a single app on the Droid Tablet
  - b. Similar systems can only run 1 product per box. Which means if you want to run Titan and Nitrain you must buy 2 complete units with 2 different key fobs, Bluetooth connectors. This forces the user to use separate control devices for each product.
5. **Auto Shut Valve** - The GX20 uses an electronic ball valve to shut the flow off to the applicator on the auger. This prevents drainage and continuous dripping into the auger. It also allows for the system to stay primed by allowing the system to lose system pressure. The valve closes when the batch is complete and maintains system pressure.
6. **AgXcel Chem Hut** – a complete chemical box that keeps the GX20 and treating liquid in a heated hut. Comes with 80 gal dual tanks.
